

Since 2006, the SMART Community Exchange in partnership with Government Officials and Business, Finance, Academia, NGO Leaders and Professional Service Providers, has successfully helped Foreign Business Investors to enter and expand their business operations in the U.S. and international markets.

Leveraging Partnerships to Advance SMART

We are unique in that we engage international experts in SMART economic development and SMART implementation projects, and connect stakeholders through SMART Education, Trade, Investment, Trade Missions, Feasibility Studies, Pilot Projects, Conferences, Workshops, Technical Assistance, and Soft-landing.

SMART Gateway City Network – SMART Exchanges

We bring thought leaders together in SMART Gateway Cities to share their SMART expertise, experience, and technology and learn about local business culture, business opportunities, and introduce them to key business contacts. These strategically planned visits in SMART Gateway City locations present excellent opportunities for both international and U.S. stakeholders to achieve business goals and establish bilateral trade, investment, and education and cultural exchange relationships.

SMART Summits

SMART conferences raise awareness, build partnerships, and showcase solutions. SMART Implementation Workshops educate participants how to build skills and implement SMART solutions. In addition to giving participants the opportunity to meet one-on-one, the SMART events also provide participants with an understanding of U.S. and local business culture. From advocacy support to financing, the SMART Summits provide participants a roadmap to advance their business priorities.
